

Bringing Order Through CAOS

Continuous Assessment – Offensive Services (CAOS)

The majority of security attacks are not targeted – cyber criminals pursue vulnerabilities. With penetration testing typically occurring once or twice annually and remediation actions untested for months, are your assets susceptible? CAOS provides a real time approach to penetration testing and vulnerability management.

Connecting the Pieces

The CAOS program mirrors the cadence of actual cybersecurity attacks by executing proven campaigns, operations, and tasks. This web based platform offers a dedicated environment to track and manage CAOS findings – providing you with the appropriate data to secure your assets.

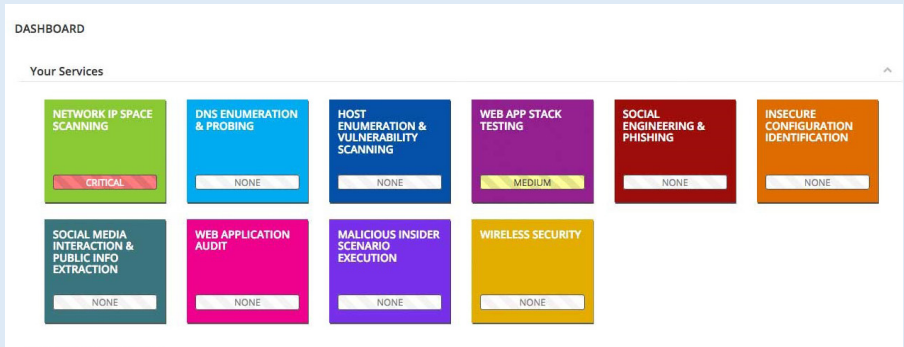

Results are either automatically generated or manually created by our experienced operators, presented through the dashboard and periodic reports. CAOS also provides support for remediating vulnerabilities and immediately retesting to ensure effective solutions.

From Small Pieces to the Big Picture

The CAOS dashboard provides easy to interpret dashboard service tiles, with a description, recommendation, and severity ranking for each finding.

- Vulnerability Assessments
- External/Internal Penetration Testing
- Real Time Analysis & Reporting
- Security Compliance Validation
- Dark Web Monitoring
- Malware Analysis & Incident Reporting
- Risk Quantification & Mitigation
- Phishing Campaigns
- Training & Education

Why Edwards?

Since 1997, our experienced Edwards team has provided business solutions that result in greater operational performance. Cybersecurity is a business risk, not just an IT problem. We assess your cyber vulnerabilities to ensure your security plan is healthy and your assets protected. Edwards focuses on your business needs – incorporating general security practices with organization specific initiatives.
