ASSESSMENTS

EDWARDS
PERFORMANCE SOLUTIONS

THE FIRST STEP IN SECURITY

Whether driven by regulatory needs or a desire to improve your security program, cybersecurity assessments are an important first step to secure your business.

We focus our assessments to help your business succeed, not merely comply.

Cybersecurity assessments provide a baseline view of your cybersecurity program. We work to uncover the gaps to help you understand your cybersecurity business risks and management strategies – establishing a plan of action based on your business needs.

Our assessment teams are experts in numerous frameworks and regulatory drivers including: NIST 800-171, NIST 800-53, CIS Critical Controls, ISO 27001, GDPR, NIST CSF, HIPAA, CMMC, CMS MARS-E, and SOC 2. Our breadth of experience assessing complex environments allows us to serve your specific business needs and provide a comprehensive view of your enterprise risks and cybersecurity program maturity.

Our assessments always include suggested projects to fill any identified gap or weakness. We suggest a prioritization of these projects to meet your specific business needs and constraints.

Your assessment partner should be focused on your organizational goals, understand your industry, and the security frameworks relevant to your business. With a team of experienced cybersecurity professionals, Edwards is your trusted advisor!

SIMPLE APPROACH; COMPREHENSIVE RESULTS

Our targeted yet simple approach delivers big results that respect your budget, timeline, and inform key stakeholders. Each engagement is unique.

PRE-ASSESSMENT SUPPORT
We conduct tailored interviews to learn about your entire ecosystem and regulatory requirements, targeting our engagement to your business needs.

SCOPING
We work with you to determine the assessment scope, identifying the boundary of the assessment, including cloud and on-premise systems, and the inheritance of the controls across the enterprise.

FULL-SCALE GAP ASSESSMENT
We review your systems, assess your processes, identify gaps, and ensure existing practices are fully implemented.

REMEDIATION PLANNING & ROADMAPPING
We provide an actionable roadmap to address remediation items, outlining business risk, priorities, and investments that result from identified gaps.

REMEDIATION SUPPORT
We provide project and technical support to remediate your gaps – helping your teams, systems, and processes become secure and compliant.

PRODUCT AGNOSTIC

Edwards is product agnostic, tailoring our recommendations to mitigate risk and close gaps without prescribing specific brands. This allows our solutions to fit your business needs absent of reseller pressures and support your cybersecurity program and your budget.
